

Environmental Atrocities in the South China Sea: the Science Behind Conservation Recourse

Kent E. Carpenter
Biological Sciences, Old Dominion University

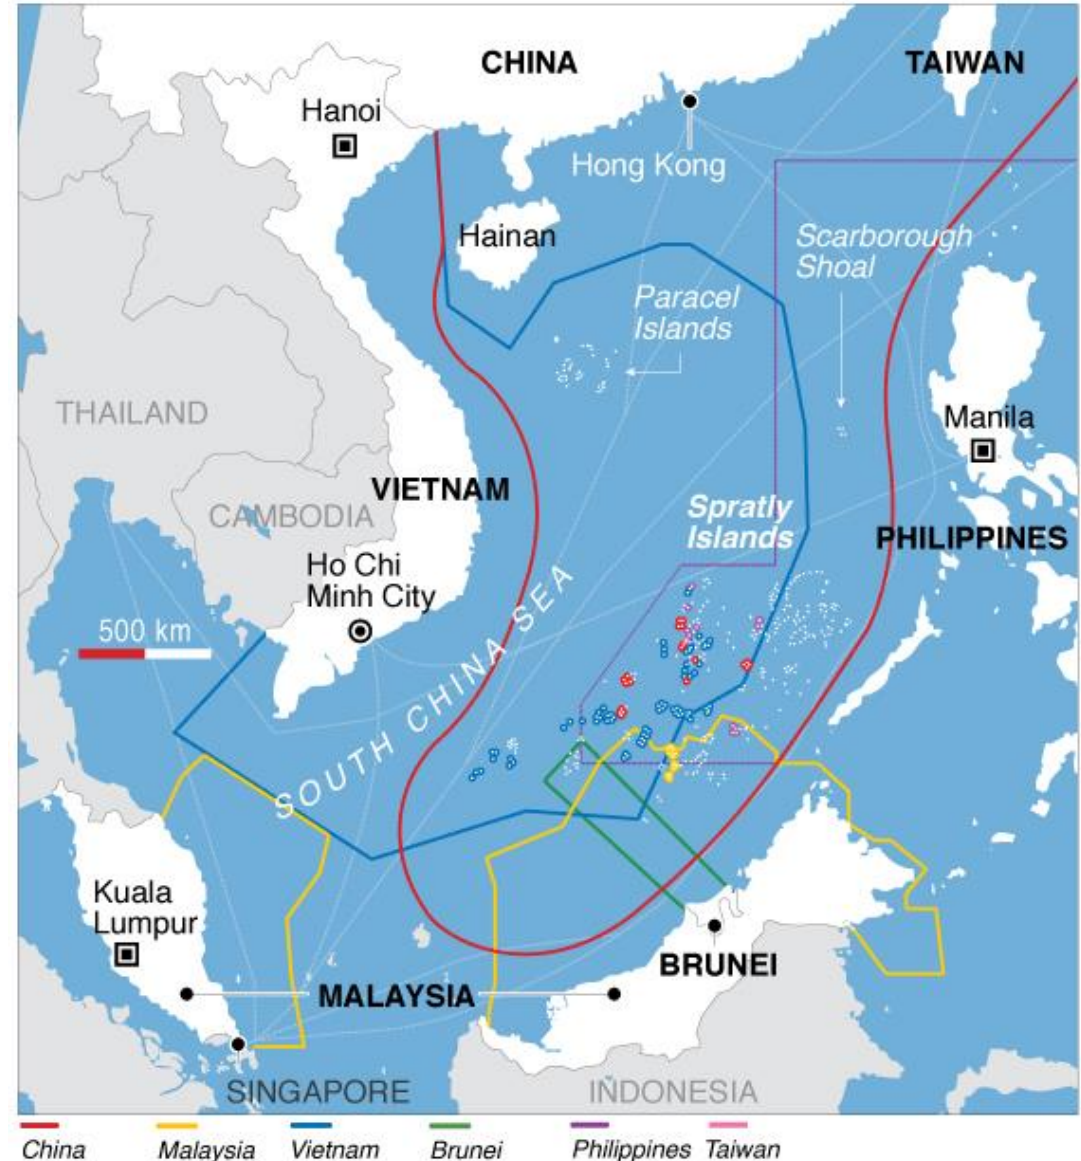

Outline

- Case background (RP vs. PRC)
- Permanent Court of Arbitration (PCA) & Hearings
- UNCLOS & the environmental damage in South China Sea
- The science: Fragile ecosystems, threatened species, connectivity
- Giant Clam extraction evidence subsequent to PCA hearings
- The Tribunal decision July, 2016

Case Background: The Republic of the Philippines vs. The People's Republic of China

- Mostly a territorial dispute under United Nations Convention on the Law of the Sea (all signatories)
- Environmental component added because of PRC fishing activities & island building activities

Complicated Case Timeline: RP vs. PRC. The so-called “Nine-Dash Line”

2002

• initial talks under ASEAN

2009

• RP initiates PCA/UNCLOS case

01/13

08/13

03/14

06/14

12/14

07/15

10/15

11/15

• PCA convenes hearing

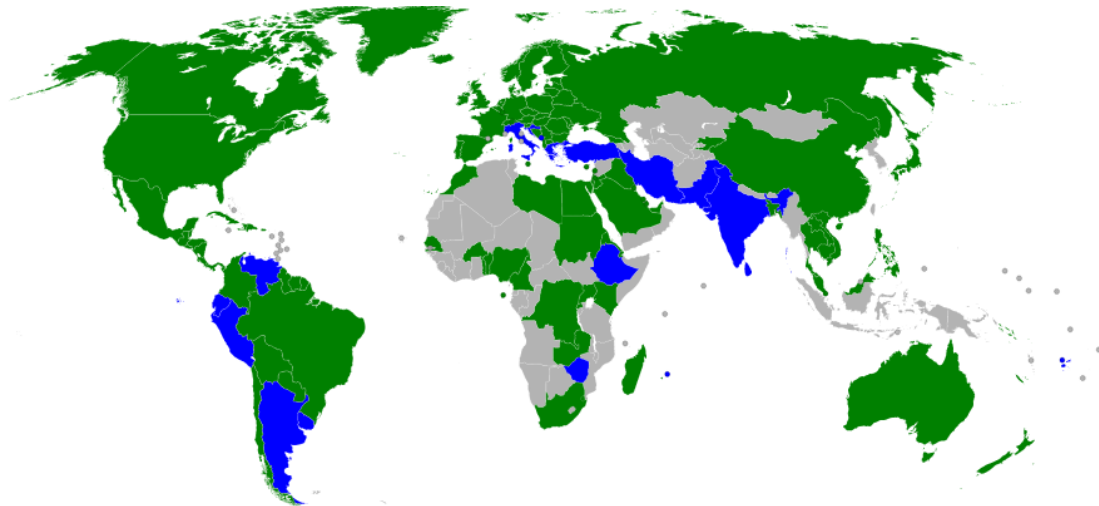

MAP ATTACHED TO CHINA'S NOTES VERBALES
Nos. CML/17/2009 & CML/18/2009
(7 May 2009)

Permanent Court of Arbitration

- Peace Palace in Den Hague, The “World Court”
- PCA oldest international court
 - 1899 Hague Peace Conference
 - 120 member countries

The Hearings

- The Tribunal

The Hearings

- Philippine Delegation
3 components:
 - 1) Philippine Government (Chair National Defense, ambassadors, Supreme Court Justice)

The Hearings

- Philippine Delegation headed by Solicitor General Florin Hilbay & Secretary of Foreign Affairs Albert Del Rosario

The Hearings

2) Counsel Team for the Philippines: Foley Hoag LLP & Legal consultants

The Hearings

3) Two expert witnesses

- Environment
- Definition of an island

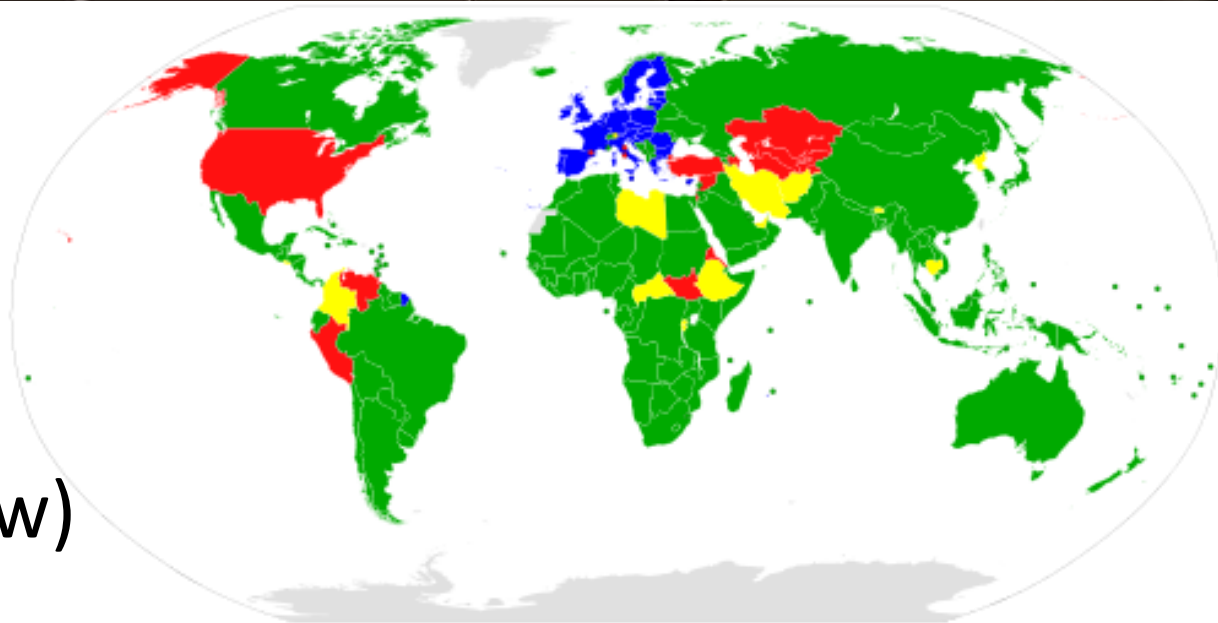

The Hearings

- Observers

UNCLOS
signatory
countries
(blue, green, yellow)

The Hearings

- PRC Delegation

UNCLOS & the Marine Environment

- Part XII
 - *Article 192. General obligation.* States have the obligation to protect and preserve the marine environment.
 - using ... means ... in accordance with **their policies**
 - are so conducted as not to cause damage by pollution to other States and their environment, and **does not spread** beyond the areas where they exercise sovereign rights.

UNCLOS & the Marine Environment

- Part XII
 - *Article 194. Measures to prevent, reduce and control pollution of the marine environment....*
 - 5. The measures taken in accordance with this Part shall include those necessary to protect and preserve rare or **fragile ecosystems** as well as the habitat of depleted, **threatened or endangered species** and other forms of marine life.

(..... Conservation Biology)

UNCLOS & the Marine Environment

- Part XII
 - *Article 192. General obligation.* States have the obligation to protect and preserve the marine environment.
 - using means ... [1] in accordance with their policies
 - are so conducted as not to cause damage by pollution to other States and their environment, and [5] does not spread beyond the areas where they exercise sovereign rights.
 - *Article 194. Measures to prevent, reduce and control pollution of the marine environment....*
 - 5. The measures taken in accordance with this Part shall include those necessary to [4] protect and preserve rare or [3] fragile ecosystems as well as the habitat of depleted, [2] threatened or endangered species and other forms of marine life.

1) Where sovereign policies met?

2) Were threatened species protected?

3) Are coral reefs in the South China Sea fragile ecosystems?

4) Were coral reefs protected (or damaged?)

5) Would the damage potentially spread to other States?

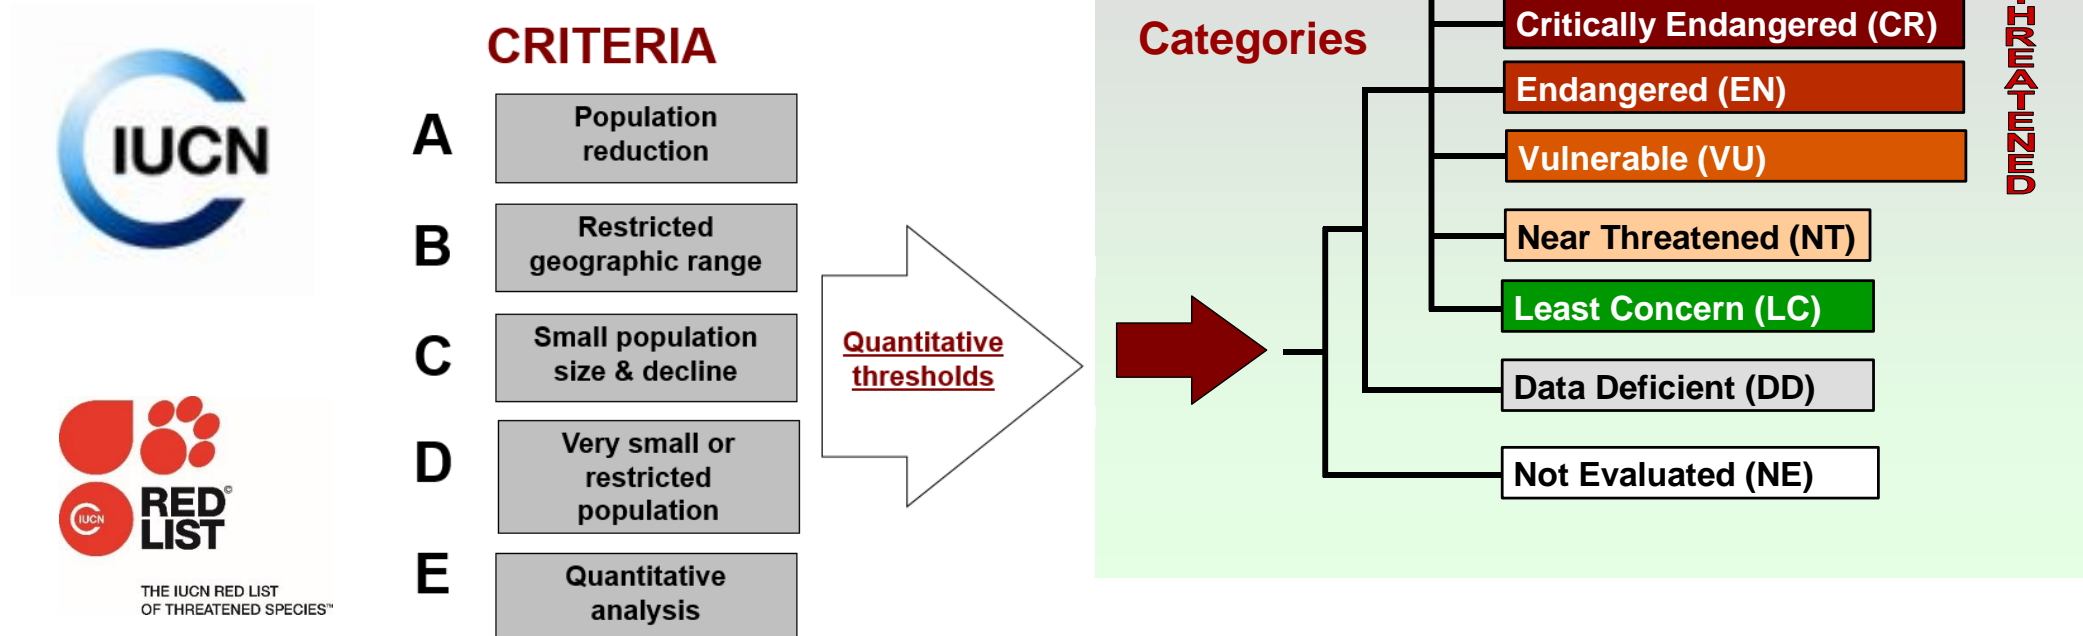

1. Were sovereign policies followed?

- Was an environmental impact statement done?
Plans to mitigate any harm from island building activities?
 - Evidence **indirectly put forward by PRC** was a handbook on monitoring pollution in coastal waters
 - No actual evidence that an EIS was completed
 - ?:

2. Were threatened species protected?

- Photographic & eye witness evidence: threatened (under IUCN Red List Criteria) and/or protected (under CITES agreements) species exploited/harmed: corals, giant clams, elasmobranchs, groupers, sea turtles

**AERIAL PHOTOGRAPH OF CHINESE
VESSEL LOADED WITH GIANT
CORALS AT SECOND THOMAS**

(11 May 2013)

Giant clams protected under CITES & assessed as threatened

(Boyle 3) Figure 1

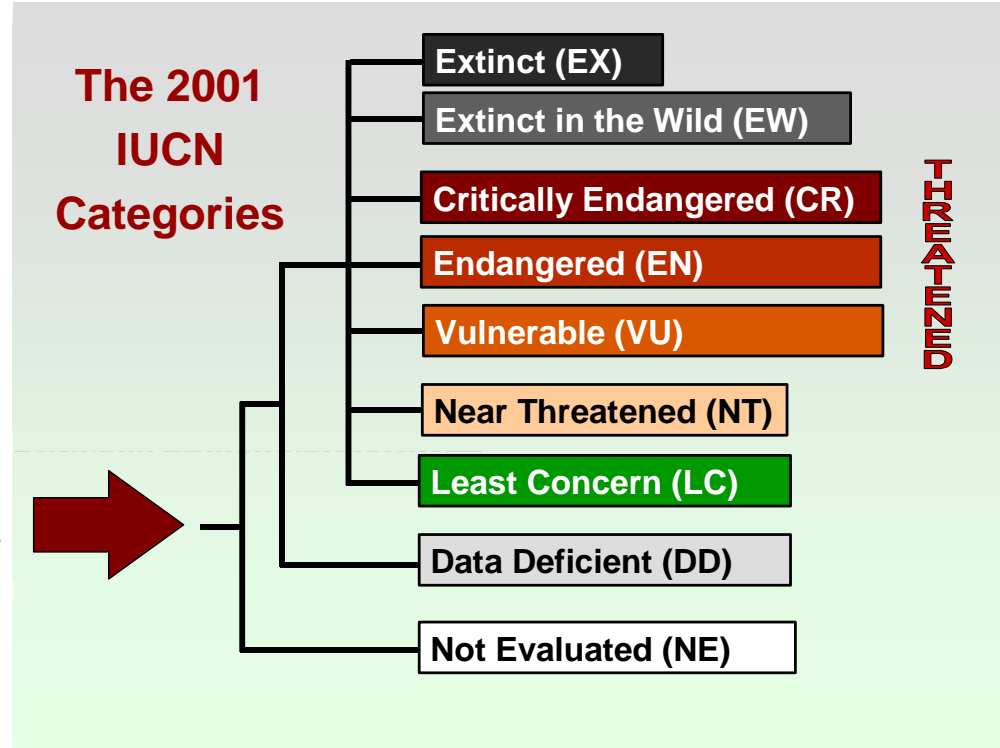

2. Were threatened species protected?

CRITERIA

- A Population reduction
- B Restricted geographic range
- C Small population size & decline
- D Very small or restricted population
- E Quantitative analysis

Quantitative thresholds

NO!

3. Are Coral Reefs “Fragile Ecosystems” and therefore UNCLOS requires protection?

- Well established... require clear water...long recovery times (5-10 years or decades if substrate disturbed)

- ?:

YES!

4. Were coral reefs protected or damaged?

- Satellite imagery of dredging operations speaks for itself

**SATELLITE IMAGE
OF MISCHIEF REEF

TIAN JING HAO CUTTER SUCTION DREDGER

From Expert Report of Kent E. Carpenter
and Loke Ming Chou, PhD

(Loewenstein 2) Figure 6

SCHEMATIC DIAGRAM OF DREDGER IN OPERATION

Sediment is broken up and **sucked** from the seabed.

Material is **transported** through a floating pipe.

Dredged material is **deposited** on the reef.

**CONCEPTUAL RELATIONSHIP
BETWEEN THE INTENSITY AND
DURATION OF A STRESS EVENT**

Paul L.A. Erftemeijer, et. al., "Environmental impacts of dredging and other sediment disturbances on corals: a review," *Marine Pollution Bulletin* 64 (2012) 1737-1765.

Major construction on 6 other reefs

Subi Reef

Fiery Cross Reef

3250 m runway

4. Were coral reefs protected?

4. Were coral reefs damaged?

5. Was damage done beyond immediate vicinity?

- so conducted as **not to cause damage by pollution to other States** and their environment, and [5] **does not spread** beyond the areas where they exercise sovereign rights (UNCLOS Part XII, article 192)
- Does destruction of coral reefs in one area, impact the viability of reefs in another area?

Two Stage Life History of Marine Species

Adults – free swimming or fixed

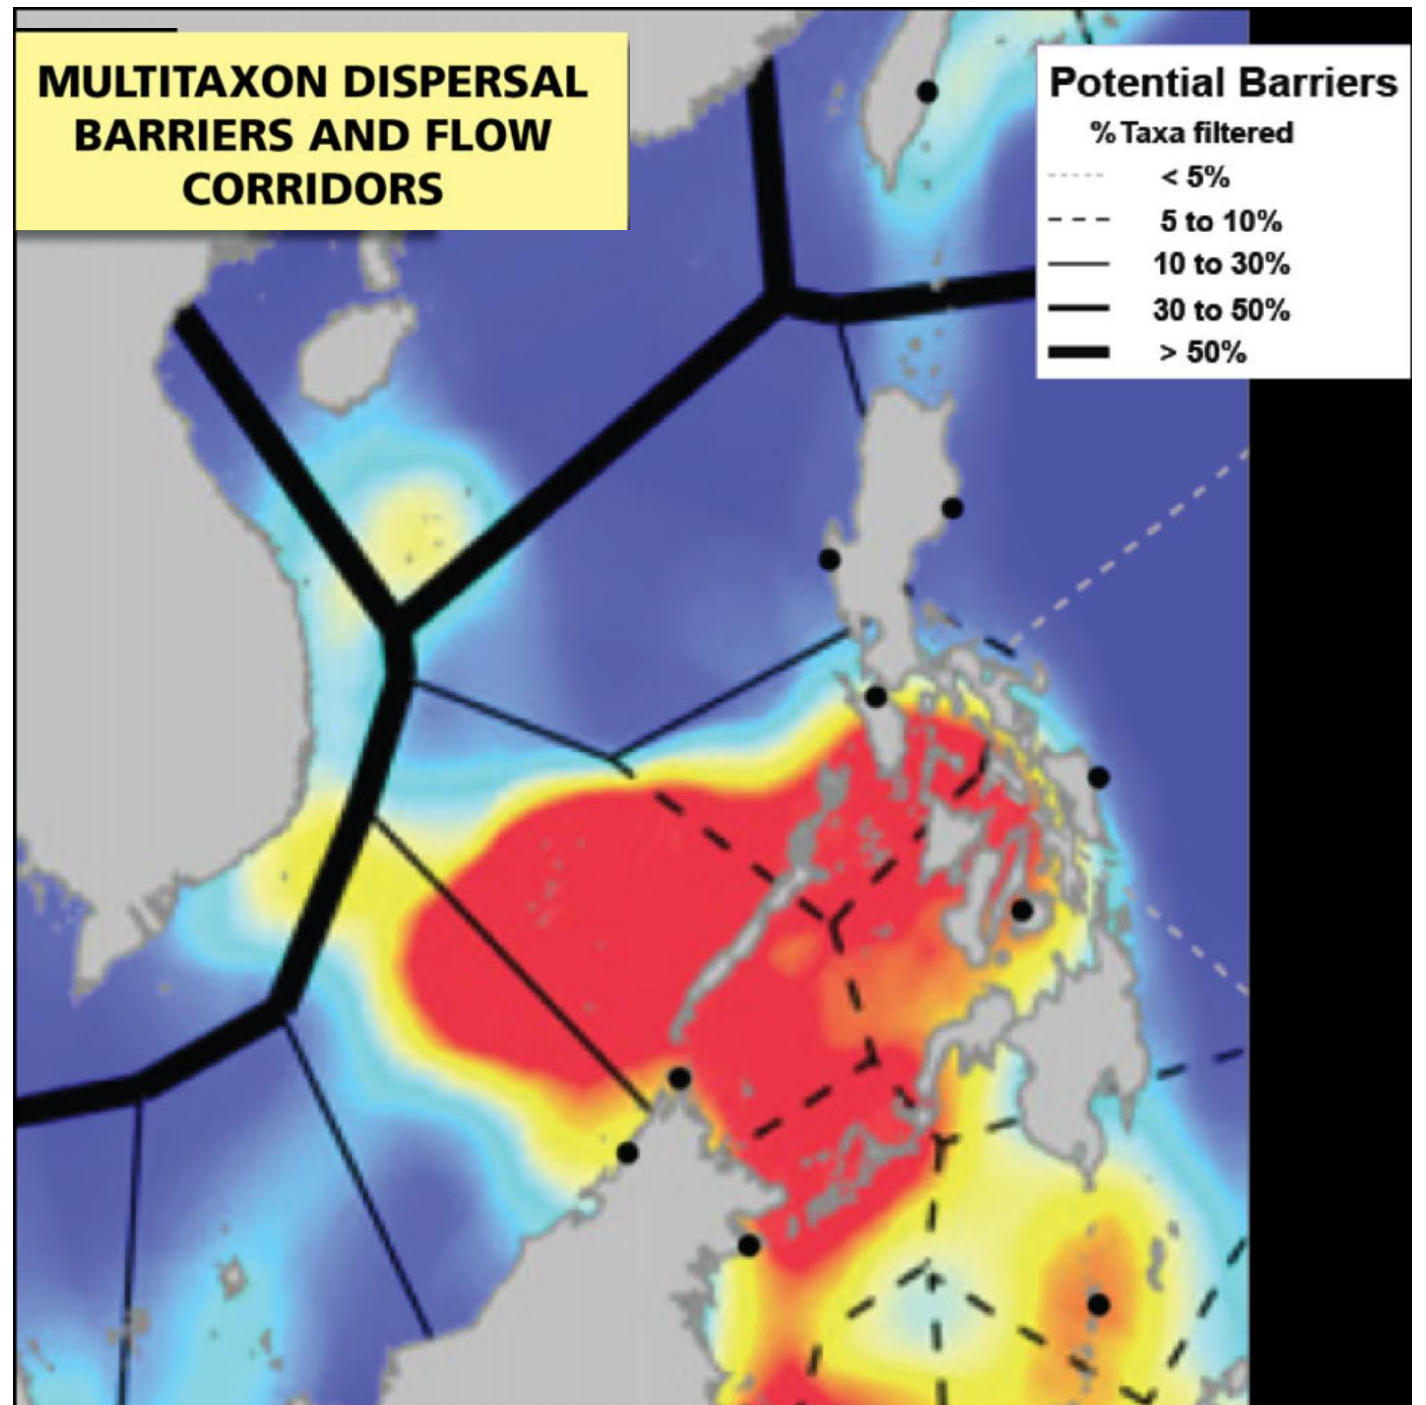

Larvae – spawn in water column and mostly at mercy of currents

Would damage harm other states?

- Larval modelling evidence
- 'Heat map' of connectivity
- Likelihood that reefs are dependent on each other for larval replenishment.

Eric A. Treml, et. al., "The emergent geography of bio"physical dispersal barriers across the Indo-WestPacific," in *Diversity and Distributions*, (2015) 1–12.

Would damage harm other states?

- Further Larval modelling evidence

RELATIVE FREQUENCY OF CONNECTIVITY BETWEEN THE SPRATLY ISLANDS AND REEFS OF THE SOUTH CHINA SEA

Dorman, et al 2015

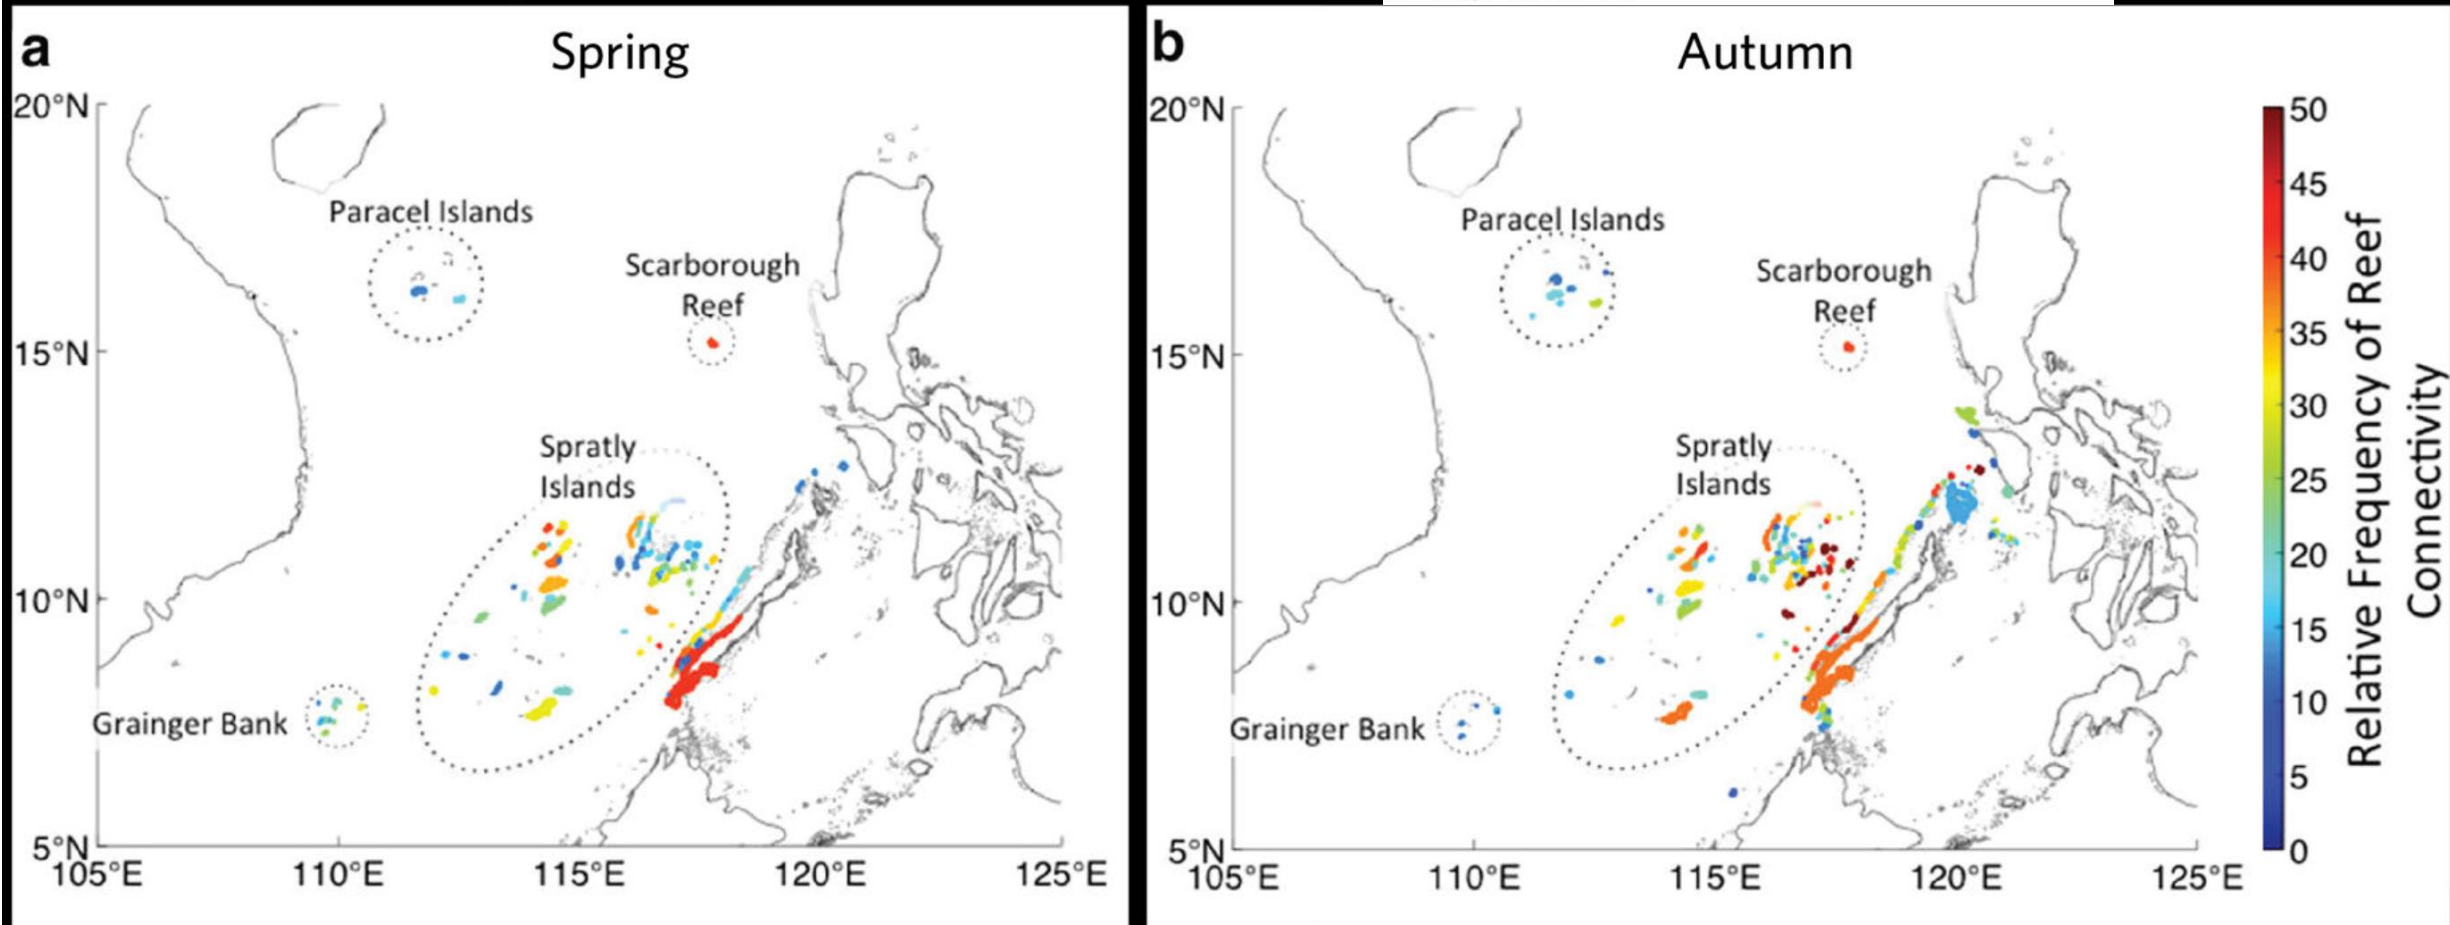

Coral Reefs
DOI 10.1007/s00338-015-1354-3

REPORT

Modeled connectivity of *Acropora millepora* populations from reefs of the Spratly Islands and the greater South China Sea

Jeffrey G. Dorman¹ · Frederic S. Castruccio² · Enrique N. Curchitser^{3,4} · Joan A. Kleypas² · Thomas M. Powell¹

5. Was damage done beyond immediate vicinity?

- so conducted as **not to cause damage by pollution to other States** and their environment, and ... **[5] does not spread** beyond the areas where they exercise sovereign rights (UNCLOS Part XII, article 192)
- Does destruction of coral reefs in one area, impact the viability of reefs in another area?

MAYBE

Clam extraction evidence after hearing

PRC claims that islands built on already destroyed reefs.....

- A lot of media attention, expose's and subsequent spotlight on 'cutter boat' clam extraction activity.

- Media is a conservation biology instrument....

Minimal Estimates of Damage to the Offshore Reefs

Type of Damage	Number of Reefs		Area Damaged (km ²)	
	PR China	Total	PR China	Total
Island Building and Reinforcement	16	31	14	15
Materials Dredging	3	7	39	40
Channel/Harbor Dredging	13	27	2	3
Giant Clam Chopper Boat Damage	41	41	104	104
Total	---	---	159	162

Courtesy of John McManus

Notes:

1. Areas where island building covered cutter boat damage omit the latter.
2. Some reefs have multiple sources of damage and so 'Number of Reefs' is not additive.
3. Many offshore reefs are heavily overfished, but this is currently difficult to quantify.
4. 1 km² is 1,000,000 m².

SUMMARY:

Evaluation of PCA Decision July 2016

PCA Case N° 2013-19

IN THE MATTER OF THE SOUTH CHINA SEA ARBITRATION

- before -

AN ARBITRAL TRIBUNAL CONSTITUTED UNDER ANNEX VII TO THE
1982 UNITED NATIONS CONVENTION ON THE LAW OF THE SEA

- between -

THE REPUBLIC OF THE PHILIPPINES

- and -

THE PEOPLE'S REPUBLIC OF CHINA

- **479 page report (on the web)**
- **79 pages on environmental dispute**
- **Territorial dispute – UNCLOS rules**
- **Environmental component:**
 - 1) Had not followed national policies**
 - 2) Threatened species not protected**
 - 3) Coral reefs fragile ecosystems**
 - 4) Coral reefs NOT protected**
 - 5) Connectivity mentioned but....**

Thank you
